

Japanese English at the Junior High School Level (1): Evaluation of Oral Interaction Skills

*Michiko Nakano
Junko Negishi
Waseda University*

In This Presentation

- A brief introduction to English Language Education in Japan
- An Illustration of Communicative Activity – Interactive English Forum
- Dysfluency: mistakes, speech rates, pauses, repetitions, fillers, evasions, etc
- Conversation Management Discourse Markers

A Brief Introduction to English Language Education in Japan

Course of Study in Japan

Grammar based

Canale & Swain(1980)

1988 Developing communicative competence

1998 Developing “practical” communicative competence

Junior High School: listening and speaking

● **Action Plan to Cultivate “Japanese with English Abilities” (2003)**

- Junior high schools, senior high schools:
graduate can communicate in English in their daily life
- Universities:
graduate can use English in their work
- English teachers:
acquire English skills
TOEFL 550(PBT), TOEIC 730, STEP Pre-1st

- **Super English Language High School**

2002: 18 senior high schools

2003: 53 senior high schools

- **Listening Test in the Common University Entrance Examination** (600,000 students)

2006 ~

- **Vocabulary (Course of Study)**

JHS: 900 words

SHS: English :1300 words, Reading: 2200 words

An Illustration of Communicative Activity – Interactive English Forum

Interactive English Forum

- An alternative to traditional speech contests

City-level, District-level, Prefecture-level

- Participants

Junior high school students

1) District-level participants: middle level students (MLS)

2) Prefecture-level participants: higher level students (HLS)

- Format

Five-minute oral interactions in groups of three

A Pilot Study 1: Dysfluency Analysis

- Analysis of Data obtained from English Interactive Forum
- Analysis of Interactions among Native Speakers (ALT)
- Mistakes, total words spoken, speech rate, pauses, repetitions, self-corrections, and evasions such as rephrasing, use of loan-words

- **Groups:** random selection

‘middle level’ students: 3×4 groups = 12 MLS

‘higher level’ students: 3×4 groups = 12 HLS

(native speakers: 3×4 groups = 12) NS

- **Topics:** given a few minutes prior to discussion

e.g. School, Family, Friends,
Culture, Useful, etc.

- **Time:** 5 minutes

Dysfluency: mistakes, speech rates, pauses, repetitions, fillers, evasions, etc.

Table 1 Mean Values of Each Group

	GRAMMAR	VOCABULARY	FLUENCY							STRATEGY	
	Number of mistakes	Total number of words	Rate of speech (words/sec)	Number of words/sentence	Number of pauses	Length of pauses (sec)	Number of sentences	Number of repetitions	Number of self-corrections	Number of fillers	Number of evasions, rephrases, loan-words
MLS	5.41	157.3	1.61	4.36	16.25	14.17	36.25	2.75	2.00	18.42	1.17
HLS	5.07	209.2	2.12	4.36	13.42	9.83	49.00	2.92	1.42	18.92	0.92
NS	0.12	241.8	2.69	7.84	14.33	11.83	31.08	1.33	0.75	10.83	0.08
MLS = 1	1.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00	1.00
HLS	0.94	1.33	1.32	1.00	0.83	0.69	1.35	1.06	0.71	1.03	0.79
NS	0.02	1.54	1.67	1.80	0.88	0.84	0.86	0.48	0.38	0.59	0.07

} In 5 min.

Grammatical Mistakes in 5 min

- MLS: 8.51 grammatical mistakes on average per 5 minutes
- HLS: 10.61 mistakes
- NS: 0.29 mistakes
- Learners' common errors: subject-verb agreement, omission of plural markers, or object nouns and some word-order mistakes – mostly negative NL transfer

Average Number of Mistakes per 100 words

MLS

HLS

NS

5.41

5.07

very few

e.g.

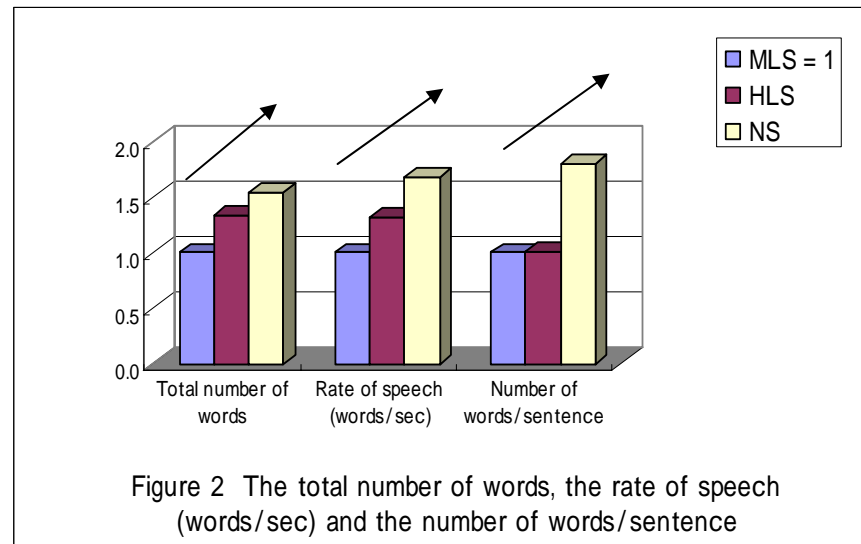

- I also like grape.
- But I don't like, too.
- Delicious is apples in Aomori.

Total number of words

Rate of speech

Number of words/sentence

MLS	HLS	<	NS
157	209		242
1.61	2.12		2.69
4.36	4.36		7.14

Number of Pauses, Length of Pauses

Number of sentences

Number of repetitions

Number of Fillers

Number of self-corrections,

Number of evasions, rephrases, and loan-words

MLS > HLS > NS

2.0 1.4 0.7

1.2 0.9 few

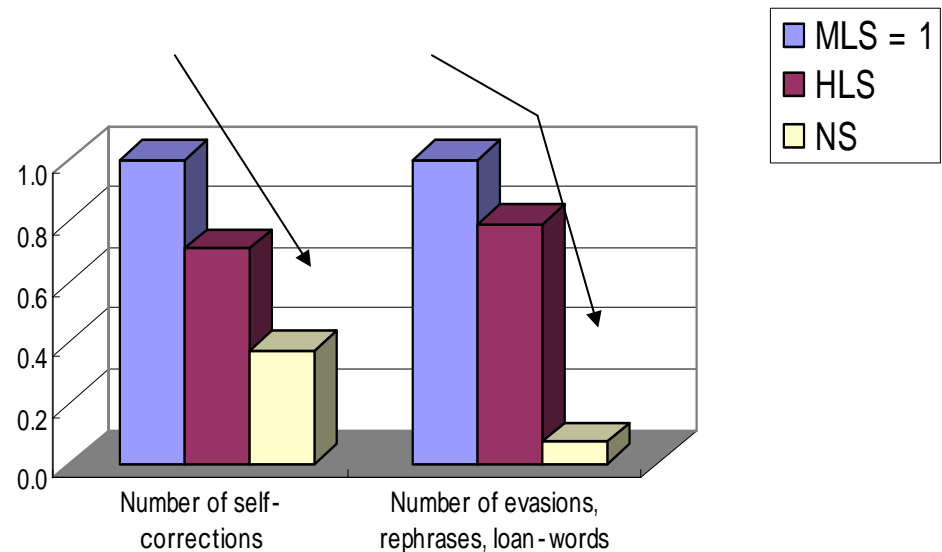

Figure 5 The number of self-corrections, evasions, rephrases, and loan-words

Discriminant Analysis

Table 2 Characteristic value and significance probability

	Characteristic value	Significance probability	
MLS - HLS	2.62	0.056	[]
HLS - NS	7.11	0.001	[**]
MLS - NS	8.48	< 0.001	[**]

Japanese English seen in Pilot 1

- MLS, HLS and NS are differentiated in terms of total words spoken, speech rate, length of pauses, and the number of sentences used Japanese learners at this level speak less but use shorter pauses slightly less often than NS, relying on shorter simple sentences, and using a lot of repetitions and fillers.

Japanese English seen in Pilot 1

- NS correct themselves but MLS do so three times more than NS.
- NS rarely use rephrasing, evasion strategies nor loan words, which is expected.
- The more fluent the group is, the lower the number of self-corrections, evasions, rephrases and loan-words is.

- Teach learners to pause at the thought units. The pauses can be a little longer, which allows us to have a sufficient speech planning time.
Be brief and orderly (maxim of manner), make your contribution relevant as informative as is required (maxims of relevance and quantity), so that they should avoid using too many repetitions, fillers, and short segments.

- Japanese learners in general tend to use shorter segments, repetitions, and fillers much more than NSs and their length of pauses is shorter and they pause less often, as if they feel pressurized to speak faster. This suggests that our image of NS fluency is to produce sounds constantly and rapidly; i.e., ‘the fluent speaker speaks very fast without any pause.’ This is true among some American speakers. But it is difficult to adjust our native speech habits. Slow speakers of Japanese are allowed to speak English slowly and vice versa.
- Learners’ image of ‘fluency’ might have a bad influence on their performance.

My intuitions about EIL principles

- In order to facilitate efficient communication, we should respect Gricean maxims: maxim of quality, maxim of quantity, maxim of relevance and maxim of manner.
- In order to maintain good relationship with other partners (see in Lecture 2 Japanese English at the junior high school level), we should encourage our students to master politeness principles: don't impose, give options and make your receiver feel good.

Conversation Management Discourse Markers

Some Features of the Use of Conversation Management Discourse Markers (CMDM)

- Participants:
 - 1) Japanese junior high school students (JHS)
 - 2) Philippine immigrants (ESL)
 - 3) Native Canadians (NS)
- Format:

Five-minute oral interactions in groups of three
- Topic: Culture

Conversation Management

- Lexical CMDMs:
 - 1 Listener's feedback to a speaker to show L's interests, understanding and reactions– *well, OK, right*,
 - 2 Speaker's thought transition markers to let L know how S thinks of the flow of the conversation (S's thought transition signals– *so, actually, anyway*)
 - 3 Speaker's asking for L's agreement: *you know*
 - 4 Speaker's paraphrasing signal, when L shows misunderstanding or non-understanding– *I mean*
- Paralinguistic signals: eye contacts, facial expressions (smiles/laughter), gestures, noises and echoing and repetitions

Number of Conversation Management Discourse Markers (CMDM)

Table 3 The number of CMDM (words and expressions) per five minutes

	JHS	Filipinos	NS
well	0	5	3
OK	2	1	1
right	0	0	0
you know	1	4	1
I mean	0	0	0
so	2	9	2
actually	0	1	0
anyway	0	0	0
TOTAL	5	20	7

Number of Conversation Management Discourse Markers (without words) per five minutes

Table 4 The number of CMDM
(without words) per five minutes

	JHS	Filipinos	NS
eye contact	1	11	13
facial expression	0	5	0
smile/laughter	7	13	3
gesture	118	11	59
hand gesture	(39)	(7)	(30)
nod	(60)	(4)	(25)
touching oneself	(19)	(0)	(4)
noise	73	53	36
mmm, umm	(39)	(5)	(0)
ah, eh, uh	(12)	(10)	(16)
oh	(11)	(20)	(6)
yeah	(11)	(18)	(14)
repetition	19	4	4

Eye contacts

- Japanese students never cast their eyes aside, nor do they show obvious eye contacts. They try to show that they are always interested in their partners' speech; on the other hand, they seem to be uneasy about looking into someone's eyes. NS and Filipinas use eye contacts frequently and at ease.

Number of Conversation Management Discourse Markers (without words) per five minutes

Table 4 The number of CMDM
(without words) per five minutes

	JHS	Filipinos	NS
eye contact	1	11	13
facial expression	0	5	0
smile/laughter	7	13	3
gesture	118	11	59
hand gesture	(39)	(7)	(30)
nod	(60)	(4)	(25)
touching oneself	(19)	(0)	(4)
noise	73	53	36
mmm, umm	(39)	(5)	(0)
ah, eh, uh	(12)	(10)	(16)
oh	(11)	(20)	(6)
yeah	(11)	(18)	(14)
repetition	19	4	4

Facial expressions

- The Filipinas use more facial expressions and smiles/laughter than the other two groups. They seem to prefer to show their understanding, agreement, interests through facial expressions. They smile even when the topic is serious. The JHS do not show their feelings on their faces unless the topic makes them laugh.

Number of Conversation Management Discourse Markers (without words) per five minutes

Table 4 The number of CMDM
(without words) per five minutes

	JHS	Filipinos	NS
eye contact	1	11	13
facial expression	0	5	0
smile/laughter	7	13	3
gesture	118	11	59
hand gesture	(39)	(7)	(30)
nod	(60)	(4)	(25)
touching oneself	(19)	(0)	(4)
noise	73	53	36
mmm, umm	(39)	(5)	(0)
ah, eh, uh	(12)	(10)	(16)
oh	(11)	(20)	(6)
yeah	(11)	(18)	(14)
repetition	19	4	4

Gestures

- The NSs use hand gestures to illustrate what they are saying. The JHS use as many hand gestures as the NS and many more than the Filipinas. Are Japanese students imitating NSs? Should we recommend our students to use hand gestures, as the NS do?

Nods among NS and Filipinas

- The NS nodded naturally on several occasions to show their understanding, agreement and/or interest in the topic.
- The Filipinas not only seldom nod, but also cast their eyes aside while another speaker is talking. They show their interests by their facial expressions, or 'Oh!' rather than nodding.

Nodding among the JHS

- The JHS nod more than twice as many as the NS and fifteen times as many as the Filipinas.
- The JHS nod in order to show that they are listening to their partner with great interest backchannels + reactive tokens

Frequent nods and misunderstanding

- Frequent nods and 'yes' is a characteristic feature of Japanese English. Both nodding and 'yes' is a signal saying that we are attending to your talk. In this sense, our nod or 'yes' is similar to NS's 'uh, uh', a form of backchannels. But frequent nodding or 'yes' seems to NS that we are implicitly saying 'I know it already; hence it implies no need to talk or your talk is uninteresting.'

Touching oneself

- The JHS frequently touched their hair, faces, arms, neck or clothes -- also seen among Koreans.

The JHS touched their body while they are talking or when they are about to talk as if they want to reduce tension of holding the floor or in taking their turn.

- The Filipinas did not touch themselves at all; they remained stiff and still.
- The NS touched their arms, in holding their arms.

Noises

- NS used 'ah, eh, uh and erm': either backchannels (uh), showing surprise (ah) or linguistic planning (eh, erm).
- The Filipinas repeatedly used 'oh'; three times as many as the NS and twice as many as the JHS. They use 'oh' to show agreement or interest instead of nodding.

Japanese favorite noise: 'mmm'

- The JHS use 'mmm' nearly forty times more, compared with the Filipinas' five and the NS none.
- Speaker's 'mmm' in Japanese is a colloquial form of 'hai' (yes) [the recent trend: self-confirmation or self-checking] and 'mmmm' is also used as a filler for linguistic planning when they are thinking what to say next.
- 'mmm' is also used in the Listener's mode; it expresses agreement and/or interest; or prolonged 'mmmm' expresses some doubt or disagreement with rising intonation.

Echoing and Repetition

- Functions of repetition and echoing: Ls express surprise or confirm Ss' idea.
- NS and Filipinas repeat two to four words.
- The JHS repeat one or two words.
- JHS's overuse of repetitions is confirmed in Murata(1994). Japanese use of repetitions tends to express understanding, agreement and/or interest.

- Japanese learners in general tend to use shorter segments, repetitions, fillers and other noises much more than NSs and their length of pauses is shorter and they pause less often, as if they feel pressurized to speak faster. This suggests that our image of NS fluency is to produce sounds constantly and rapidly; i.e., ‘the fluent speaker speaks very fast without any pause.’ This is true among some American speakers. But it is difficult to adjust our native speech habits. Slow speakers of Japanese are allowed to speak English slowly and vice versa.
- Learners’ image of ‘fluency’ might have a bad influence on their performance.

So, as I said before, EIL pedagogy requires two principles:

- In order to facilitate efficient communication, we should respect Gricean maxims: maxim of quality, maxim of quantity, maxim of relevance and maxim of manner.
- In order to maintain good relationship with other partners (see in Lecture 2 Japanese English at the junior high school level), we should encourage our students to master politeness principles: don't impose, give options and make your receiver feel good.
