

Financial Economics

Yusuke Osaki

1. My research area is economics of uncertainty and financial economics. In recent studies, I examine how behavioral factors such as ambiguity and regret have impacts on financial markets.
2. The goal of my supervision is that you have enough research capability to build up research careers. After completing your graduate study, you need to have the capability to complete publishable papers in established academic journals by yourself. First, you write a review paper on your research topic. After that, we have regular meetings to proceed the research. To complete Ph.D., you complete at least one paper individually. Moreover, I recommend that you write at least one empirical paper.
3. Both theoretical and empirical studies are indispensable for the study of asset pricing. Because my research is theory-oriented, you have to master financial econometrics by yourself.
