

## Business Strategy and the Natural Environment

Malen Joel

1. My research investigates business strategy and management issues related to reciprocal relationships between business activities and the natural environment. I conduct empirical analyses of relevant phenomenon using econometric methods as well as theory development using agent-based modeling approaches.
2. Any students accepted for supervision must develop a dissertation on a topic related to business and the natural environment using either quantitative empirical methods or agent-based modeling.
3. Any students interested in applying must have a basic a foundation in statistical and econometric methods. Students should also be highly motivated to develop any additional skills necessary for addressing their thesis topic which they presently lack. Interested students should contact me directly prior to application via email ([malen@waseda.jp](mailto:malen@waseda.jp)) and describe
  1. the relevance of their background to pursuit of a doctoral degree
  2. a brief review of any academic paper they feel is of relevance to their research interests (a simple short description of several strengths and weaknesses of the paper is sufficient).
  3. Their GMAT scores

Applications from students who do not contact me prior to applying will not be considered.
