

経営戦略と自然環境

マレン ジョエル 准教授

1. 担当教員の専門分野(研究領域)・現在の研究テーマ

My research investigates business strategy and management issues related to reciprocal relationships between business activities and the natural environment. I conduct empirical analyses of relevant phenomenon using econometric methods as well as theory development using agent-based modeling approaches.

2. 指導方針

Any students accepted for supervision must develop a dissertation on a topic related to business and the natural environment using either quantitative empirical methods or agent-based modeling.

3. 学生に対する要望・その他

Any students who apply must have a strong grasp of statistical/econometric methods prior to beginning the program. Students should also be highly motivated to develop any additional skills necessary for addressing their thesis topic which they presently lack.
