

## 2027年度 専門教育科目演習(ゼミ) 募集 ゼミ紹介 (クーパーゼミ)

トラック・分野	演習名	担当教員	ゼミ紹介文
総合・学際 科目分野	コーパス言語学研究	クーパー クリストファー ロバート	<p>Corpus linguistics involves identifying patterns in large samples of language data. This seminar course will introduce students to corpus linguistics by reading and presenting on papers and completing mini-research projects with hands-on corpus work.</p> <p>To begin with, students will use corpus tools to become familiar with basic corpus methods such as choosing and creating a corpus, word frequency lists, keywords, collocations, and concordancing. Depending on the interests of the students, more advanced methods will be introduced, sometimes using Python, such as register analysis, text classification, sentiment analysis, and topic modelling. Students will complete projects on language that interests them (e.g. conversation, business communication, academic language).</p>
