Interviewer's name			Interviewer	

† In this study, it is very important to follow the instruction for interviews. Please carefully follow all the notes below.

Note for interviewers 1.

Please read the entire question **exactly as they are written on the questionnaire form.** It is very important to provide the same explanations and options to all participants. If participants say that they don't understand the meaning, terms or expression of the question or answer options, please respond, "you can answer the question according to your understanding." Interviewers should not give their own interpretation of the question or answer option, or add additional explanatory remarks.

Note for interviewers 2.

Do not read the listed answer options on a card, unless the instruction says, "Read the answer options on a card."

* Exception: When you find it difficult for some participants, such as the elderly and the visually impaired, to read the question and answer options on a card, please read the answer options on a card.

Note for interviewers 3.

"Don't know" and "No answer/Don't want to answer" are listed on the answer option card. If participants are pondering while looking at the answer options, **don't prompt participants' answer by asking, "you don't know?" or "you don't understand?"** First see the participants' response, then write an answer on the answer sheet following the instructions below:

  • Record "Don't know" only when the participants themselves say they "don't know."
  • Record "Don't want to answer/No answer," only when participants "don't answer the question and keep silent", or when participants say that they "do not wish to answer the question."

* When participants do not answer the question and keep silent, then

1) Prompt their answer by asking "what do you think?"
2) See the response to the prompts.
    • Case 1. If participants say, "Please wait a second. I'm still thinking," then wait for their answer. Do not rush them.
    • Case 2. If participants say "Well, I'm not sure," then ask participants if 1) they don't understand the meaning of the question, or 2) they don't know which answer option to choose.

    1) If participants don't understand the meaning of the question,
    encourage them to answer, "you can answer the question according to your understanding, so please choose an answer that is closest to your thoughts from the list of answer options on the card." However, interviewers should not explain the questionnaire items. * If participants cannot answer the question, see 2) below.

    2) If participants don't know which answer option to choose,
    please confirm their response by saying, "are you sure you don't know which answer option to choose?" record "Don't know," and proceed to the next question by saying, "then we'll move on to the next question."
    If participants say they "don't know," after they examined the questionnaire and answer options, you should not force them to choose an answer option from the provided list. However, if participants do not seem to pay serious attention to the question, and simply say they "don't know," then encourage them to think about the question again.

    3) If participants keep silent

even after being asked whether they do not understand the question or do not know which answer option to choose, ask "Can I move on to the next question?"; if they still would not answer the question, record "Don't want to answer," and proceed to the next question.

[Interviewer note]
1. Please read the entire question exactly as it is written on the questionnaire form.
2. Do not read the listed answer options on a card.
Please ask respondents to answer by the " answer option number," not by the wording of the answer option.
* If respondents answered by the wording instead of the number, please respond: "Would you answer by the answer option number in order to enter your answer correctly?"

<For all>

[Notes for interviewer: Please read the following statement first before you start the study.]

You may find some questions difficult to answer, but you can answer as you like to the extent that understand the question. Any answer you give is very precious. We hope you understand that these questions are necessary for cross-national studies in the future
