

FAQ for Evaluation sheet

No.	Questions	Answers
1	What should I write in column "The courses that your student took" of each table?	Please let us know all the specific topics your student has covered in the Subject (Mathematics, Physics, Chemistry, and Biology) through secondary/high school (such as Calculus, Statistics and Algebra-Based etc.).
2	What should I do if my student didn't take calculus held up as the example?	You don't have to follow the example. We do not have a set of required courses for the evaluation sheet. We would like to know what areas of each Subject your student has covered through the evaluation sheet. You can add course contents to the tables or make change to the tables according to your high school curriculum because the course contents are just examples based on the AP Courses and Exams.
3	My school doesn't have an educational system that ranks students. What should I write in column ① of each table?	Please write in the column ① that the ranking system doesn't exist at your school.
4	What should I do if I can write down the names of course contents, but can not write the number of study hours per week for each course content?	Please write the number of study hours per week for each course in the total column.
