＊Special Seminar＊

Some applications of information geometry

Huafei Sun

School of Mathematics and Statistics, Beijing Institute of Technology

Abstract

In this talk, we first introduce the main concepts of canonical information geometry and matrix information geometry. Then we consider some applications of information geometry, for instance, to optimal control, stability of linear systems, matrix manifold learning, and localization of wireless sensor networks.

Date: January 26 Friday 17:00-18:30

Venue: 51 Building, Room 17-06, Nishi-Waseda campus, Waseda University

Supported by

・Department of Mathematics, Waseda University
・Multiscale Analysis, Modelling and Simulation,
 Top Global University Project, Waseda University
