

Taking the class by Prof. Koriyama is an enjoyable experience and I am glad to share my feelings.

Based on my interest in Game Theory, I took part in basic and theoretical courses of Game Theory in the spring quarter last semester. After finishing those courses, I thought It's time to learn about game theory in application then I took Professor Koriyama's class.

To my surprise, I have learned much far beyond my expectation.

Prof. Koriyama not only introduced political examples of Game Theory application, but also precisely taught us the methodology behind and the necessity of Game Theory. This course broadened my perspective on economic events. Moreover, I really appreciate the type of exam. Instead of just a paper test or a report, both Midterm and final exams were more like group discussions where everyone gets the chance to share his or her own opinions and absorb others' opinions. Prof. Koriyama showed us lots of respect that he almost never stopped our discussion even if we ran out of time and he would like to give some advises after we finished. If there were any regrets, I wish I was more positive in the class.

I met Prof. Koriyama out of the class by chance once and we talked a lot including daily life, reflection on the class, policy on COVID-19. He was generous to share his perspectives. I think if students could know that the professor is such a gentle person, there will be more students willing to take the course since there are no audition for courses on summer quarter.

As an overseas student, of course I am interested in studying abroad. I can not agree more that studying abroad is a proper way to pursue advanced studies especially when I am planning to apply for a PhD program. And since many experiments and analyses are based on local data, I think studying abroad can reduce such bias. It is very kind of Waseda University providing chance for students to study abroad every year. I am going to attend the Study Abroad Fair Event held on October 1st & 2nd for better knowing the studying abroad process. Also, If there is

Q1. The reason you took this class

I took the class because my seminar professor (Prof. Funaki) recommended it to me. Also, I'd love to learn every topic related to game theory.

Q2. The result that you gained from the class

I've learned many mathematical expressions using in game theory. That may work as the foundation of my future papers.

Q3. About Prof. Koriyama

Prof. Koriyama is always patient and friendly with every student. His English is very easy to understand, and the slides are always clear. To give a presentation on his class is very helpful for understanding better.

Q4. About your interest to study abroad (ex. Ecole polytechnique)

I'm planning to stay at Waseda University to get the PhD degree. Thus, I'd love to spend some time study abroad. I've been learning French during the undergraduate years that I actually really interested in getting exchange to École polytechnique.

Q5. About your future career (ex. PhD. in Economics, International firm, etc)

I'm planning to stay at Waseda University to get the PhD degree.
